COMPANIES THAT RELY ON A FLEXIBLE WORKFORCE HAVE ONE THEME IN COMMON. THE DESIRE TO ACQUIRE AND MANAGE WORKERS THAT PROVIDE THE MOST VALUE, AT THE RIGHT COST AND MAINTAIN COMPLIANCE.

Many Fortune 500 organizations have successfully implemented the Beeline VMS to track and optimize the contingent staff. They are now evolving into the next phase of tracking; Services Procurement. Services Procurement is the strategic procurement and management of complex service categories. As organizations look for additional ways to cut costs and improve process controls, this is the next area of spend being identified.

To meet these needs of our customers and the marketplace, Beeline provides a comprehensive, fully customizable solution designed to align with how you source, negotiate, and engage the Statement-Of-Work (SOW) and Project based initiatives. The Services Procurement solution offers capabilities that help improve data transparency, mitigate risk, drive process efficiencies, and ensure quality within one system of record. Beeline recognizes that all engagements are not created equal and your organization will now have the flexibility to manage these tasks individually. You will continue to receive the same level of visibility, tracking, and reporting regardless of the starting point within the procurement lifecycle.

As you continue to expand beyond managing contingent staff, consider using similar scalable tools to support your services procurement process. From sourcing through negotiation, into engagement management, invoicing and payment through our RFx, SOW, and Project solutions.

RFx

Beelines RFx functionality gathers information from vendors to build, competitively source, and evaluate the best vendor(s) to meet your business requirements.

SOW

Collaboratively build and negotiate SOW terms with real-time visibility into changes being made through system alerts, notifications, activity streams, and redlining throughout all three phases of a SOW.

Project

Transparency to manage and pay milestones, time worked, expenses, track resources, on-boarding/off-boarding, realize early pay discounts, and deliver performance feedback to truly measure the success of your engagements.

Time and Expense

Alleviate the administrative burden by improving the overall submission experience with an intuitive and simple user interface that will direct users to the time and expense entry screen upon login.

Billing and Payment

Our objective is to accommodate the business rules and practices of the client by consolidating invoice data, including billing information on milestones and billable consultants.

Reporting and Analytics

Actionable reporting drives behaviors that enable companies to meet program improvement goals. Gain complete visibility with program statistics, unlimited metrics across quality, cost, compliance, and process efficiency.
